Acknowledgement	i
Abstract	ii
Thai Abstract	iv
Table of Contents	vi
List of Tables	ix
List of Figures	xi
Chapter 1 Introduction	1
Chapter 2 Literature Review	5
2.1 Soil Erosion	5
2.1.1 Erosion Process	5
2.1.2 Effect of Soil Erosion	5
2.1.3 Erosion Prediction and Estimation	7
2.1.4 Erosion Control Methods	11
2.1.5 Criteria for Determining Tolerable Erosion Rates	12
2.2 Productivity	14
2.2.1 Soil Productivity	14
2.2.2 Relating Soil Erosion and Productivity	14
2.2.3 Approach to Soil Productivity Estimation	16
2.2.4 Maintaining and Restoring Soil Productivity	18
2.2.4.1 Soil Organic Matter	18
2.2.4.2 Soil Amendments	19
2.2.4.3 Earth-Moving Restoration	20
2.2.4.4 Cropping and Tillage System	20
2.2.5 Development and Practices for Sustainable Productivity	22

Chapter 3	Materials and Methods	23
3.1	Experimental Site	23
3.2	Experimental Design	25
3.3	Data Collection and Analysis	26
Chapter 4	Results	28
4.1	Historical Background of Ban Yapanae	28
4.2	Changes in Availability of Natural Resources	28
4.3	Socio-economic Environment	29
4.3.1	The Village Households	29
4.3.2	Agricultural Aspect	30
4.3.3	Upland Rice Cultivation and Management	32
4.3.4	Income	36
4.3.5	Experience on Soil Conservation Measures	37
4.4	Climatological Data of Maehongson	38
4.4.1	Start of Growing Season	38
4.4.2	End of Growing Season	40
4.4.3	Potential Growing Season	40
4.5	Climatic Data of the Experimental Site	40
4.5.1	Rainfall	40
4.5.2	Rainfall Intensity	41
4.6	The Soil of The Experimental Area	43
4.7	Distribution of Crop Residue	44
4.8	Ground Cover Percentage	45
4.9	Cropping Factor (C-value)	47
4.10	Yield of Upland Rice	50
4.11	Top Soil Movement	52

Chapter 5	Discussion	56
Chapter 6	Conclusion	60
Chapter 7	Recommendation	61
Chapter 8	References	63
Chapter 9	Appendices	67
	Appendices A	68
	Appendices B	70
	Appendices C	81
	Curriculum Vitae	85

List of Tables

Table	Page
1 Guide for assigning soil loss tolerance value to soil having different rooting depths	13
2 Total households and population of three villages around study area	29
3 Family structure of the study area	30
4 Average number of plots, areas and years used for cultivation	31
5 Distribution of cultivated plots at different positions along the slope	31
6 Distribution of the cultivated plots in different gradient	32
7 Cultivated area (rai per household) and residue management on upland rice field	33
8 Varieties of upland rice used by farmers in 1989	33
9 Number of farmers who weeded the upland rice field	34
10 Labor required for maintaining one rai of upland rice (man-day)	34
11 Number of farmers who applied fertilizer in upland rice fields	35
12 Average yield of upland rice in 1989	35
13 Rice sufficiency for home consumption (household)	36
14 Return, expenditure and saving of the households	36
15 Farmers' experience on soil conservation measures	37
16 Climatological data of Muang District, Mae Hong Son Province (1975-1982)	39
17 Rainfall amount and erosivity index of Jabo station in 1989, Pangmapha District, Maehongson Province	42
18 Soil analysis from upland rice fields	43
19 Dry matter of residue before planting	44
20 Estimated C-subfactor for using in USLE model	48

Table	Page
21 The C-value for each upland rice crop stages on different residue management	49
22 Yield of upland rice (t/ha) from the experimental plots	50
23 Yield of upland rice (t/ha) from the observed fields	50
24 Total dry matter of upland rice in different treatments (t/ha)	51
25 Top soil loss (t/ha) measured by staking technique in the experimental fields	52
26 Estimated LS-factor of experimental plots	53
27 Average soil loss from different treatments estimated by USLE model	54
28 Top soil loss from observed fields	55
Appendix	
B-1 Daily rainfall on TG-HDP meteorological station at Jabo village, Pangmapha District, 1989	70
B-2 Daily rainfall on experimental field at Yapanae village, Pangmapha District, 1989	71
B-3 Kinetic energy and erosivity index of Jabo station, Pangmapha District, Maehongson Province, 1989	72
B-4 Cover percentage by crop residue	76
B-5 Cover percentage by crop canopy	77
B-6 ANOVA of accumulated soil loss as measured by staking technique and estimated by USLE modeling	78
B-7 Top soil loss from observed upland rice fields (t/ha) by USLE modeling and staking technique	78
B-8 The C-value for each crop stage period of observed fields	79
B-9 The C-value for each crop stage period on different residue management	80

List of Figures

Figure	Page
1 Concept of eroding productivity	15
2 Map of Mae Hong Son and Chiang Mai provinces	24
3 Rainfall and erosivity index at Pangmapha District, Maehongson Province (1989)	41
4 Mulch cover percentage throughout growing season	45
5 Canopy cover percentage from early planting	46
6 Canopy cover percentage from regular planting	46
7 Total ground cover percentage throughout growing season	47
8 Cropping factor in upland rice field	48
Appendix	
A-1 Overview of the positions of intensive trials on the farmer fields	69
C-1 Estimating percentage of mulch cover	81
C-2 Map of Mae Hong Son Province	82
C-3 Map of Pang Ma Pha District	83
C-4 Map of road and altitude of Pang Ma Pha District	85
