ACKNOWLEDGEMENT	i
ABSTRACT	ii
TABLE OF CONTENTS	vii
LIST OF TABLES	viii
LIST OF FIGURES	x
INTRODUCTION	1
LITERATURE REVIEW	3
Organic matter and soil productivity	3
Crop residues in rice-soybean cropping system	5
Green manure as a source of organic matter and nitrogen	7
MATERIALS AND METHODS	10
Informal and formal surveys	10
Field experiment	11
RESULTS	15
Informal and formal surveys	15
Sources and management of organic matter	15
Potential constraints in increasing soil productivity through organic replenishment	26
Field experiment	29
Some characteristics of <i>Sesbania rostrata</i>	29
Shoot dry matter of rice	30
N-uptake in straw and grain of rice	31
Rice yield and yield components	34
Economic returns	38
Changes in soil properties	43
DISCUSSION	45
Burning rice straw	45
Effects of organic matter on rice crop	45
Effect of organic matter on soil	48
Economic consideration	48
CONCLUSION	50
REFERENCES	52
APPENDIX	56
CURRICULUM VITAE	62

LIST OF TABLES

Table	Page
1. Treatment combinations	11
2. Soybean residue management in the farmers' fields	17
3. The amount and nutrient content of soybean residues in the farmers' fields	18
4. Rice straw management in farmers' fields	19
5. The amount and nutrient content of rice straw in the farmers' fields	20
6. The amount and management of soybean residues in the farmers' fields	21
7. The amount and management of rice straw in the farmers' fields	21
8. Animal manure and chemical fertilizer used in the rice fields and the soybean fields	23
9. C/N ratio and the nutrient content of animal manure in the farmers' fields	24
10. Farmers' activities during April-July	25
11. Plant density, biomass, dry matter, nutrient accumulation and carbon content of <i>Sesbania rostrata</i> at 50 days old	29
12. The shoot dry matter (t/ha) of rice as influenced by different N sources averaged over varieties at panicle initiation stage	30
13. Average N-uptake (kgN/ha) in straw of RD7 and KDML105 at different stages	32
14. N-uptake (kgN/ha) in rice grain of various treatments	33
15. The N concentration (%) in rice grain of various treatments	34
16. Grain yield (kg/ha) of rice in different treatments	36
17. The number of panicles per square-meter in different treatments	37

18.	The 1000-grain weight (g) of rice in different treatments	37
19.	The percentage of filled grain of rice in different treatments	38
20.	Total variable costs and return to individual treatments (B/ha)	40
21.	Marginal rate of return in treatments with different N sources comparing to no N	41
22.	Marginal rates of return of individual treatments comparing to no N at different prices of urea	42
23.	Maximum marginal rates of return treatments at different costs of land preparation and urea	42
24.	Soil analyses results before and after harvest	44

Appendix Table

1	ANOVA of shoot dry matter (kg/ha) of rice at different stages	59
2	ANOVA of N-uptake (kg/ha) in rice straw at different stages	59
3	ANOVA of N-uptake (kg/ha) in grain of two rice varieties in various N sources	60
4	ANOVA of grain yield (kg/ha) of two rice varieties in different N sources	60
5	ANOVA of N concentration (%) in grain of two rice varieties in various N sources	61
6	ANOVA of yield and yield components of two rice varieties in different N sources	61

LIST OF FIGURES

Figure	Page
1. The flow of organic matter in rice-soybean cropping system	16
2. Green manure (GM) and rice-soybean cropping system in Chiang Mai Valley in relation to rainfall and irrigation water distribution	28
3. Shoot dry matter of rice as influenced by different N sources averaged over varieties at panicle initiation stage(PI), flowering stage(F) and harvesting stage (H)	31
4. N-uptake in rice straw at panicle initiation stage(PI), flowering stage (F) and harvesting stage(H)	32
Appendix Figure	
1 The layout of field experiment (Factorial in Randomized Complete Block Design)	57
2 Decision tree: minimum necessary criteria for green manure production (Garrity and Flinn, 1988)	58
