## ACKNOWLEDGEMENT

I wish to express my sincere gratitude and deepest appreciation to my supervisor and thesis chairman, Dr. Aree Wiboonpongse, for her valuable advice, guidance, encouragement and support throughout my graduate program. This thesis would not have been completed, without her kind assistance and insightful supervision in data analysis and writing of some important issues in this research. I am greatly indebted to her.

Grateful appreciation, gratitude and respects are also expressed to Dr. Songsak Sriboonchitta, thesis committee member, for his special guidance in farm plan model and various comments; and to Dr. Methi Ekasingh and Mr. Phrek Gypmantasiri thesis committee members, for their constructive criticisms and comments on the research contents.

Special regards and grateful thanks are also extended to all the faculty members of Agricultural Systems Program for imparting their precious academic knowledge and experiences which initiated me to understand the world of agricultural systems. It is also a pleasure to thank the administrative staff of the Multiple Cropping Centre (MCC) for their kind help and warm hospitality.

Grateful acknowledgement and special gratitude are also given to the Ford Foundation for awarding the scholarship during my study and research; and to the Rockefeller Brothers' Fund through the Southeast Asian Universities Agroecosystems Network (SUAN) for additional funding support for my thesis research.

Many thanks are particularly due to Wawta, Suporn, Tipathorn, Khun Pong, Anang, Rongrus, Chanchai, Sirichai and Khun Kuson for their kind concerns and worth assistance, I am most appreciative to all of them.

And finally, special recognition is due to my dear A-Pa, A-Ma, Pantip, Siwilai & Jumlern, Prisana & Somsak and Kitti for all the love, sacrifice, patience, understanding, encouragement, help and support they provided during this endeavor.
