## ACKNOWLEDGEMENT

The author would like to express the appreciation and gratitude to the academic adviser as well as the chairman of the thesis examining committee, Assoc. Prof. Dr. Benchaphun Ekasigh, for her invaluable guidance and support of the graduate study.

The author would like to thank to the Thesis Examine Committee, Assoc. Prof. Benchavan Tongsir, lecturer Phrek Gypmantasiri, and Mr. J.F. Maxwell for their constructive suggestions.

The author is grateful to the Ford Foundation and the Multiple Cropping Center, Chiang Mai University for a granting scholarship as well as the International Center for Research in Agroforestry (ICRAF) and Dr. David Thomas the funding this research.

Special thanks is given to the Royal Project in Wat Chan and Wat Chan Highland Agricultural Development Center for the population data and also for accommodation during field work. Special appreciation is given to staff of the Agricultural System (AGS) program and staff of Multiple Cropping Center which facilitated and equipped the tool and materials during the study.

The acknowledgement also given to the Karen people of Wat Chan whose kindness, and patience help answer many questions. The research would not be successful without their participation. As well as Mr. Ho Dac Thai Hoang, shared his ideas, co-operation, and participation in data collection.

Finally, high pleasure is due to her mother for all the love, encouragement, and support throughout the study period.

Patcharin Nawichai
