

APPENDICES

Appendix 1 Weekly values of weathering data (December 1997 - March 1998) during the field experiment

Appendix 2 The chemical and physical soil properties at 0-30 cm of soil depth in the rainfed lowland field at LARTC, Lampang.

Field plot	pH	Organic matter (%)	Avail. P (ppm)	Exch. K (ppm)	Texture	Sand (%)	Silt (%)	Clay (%)
Block A3	5.5	1.11	131	96	Sandy clay loam	64	25	33
Block A4	5.4	0.97	144	77	Sandy clay loam	62	27	29

Note Average data shown in the table were sampling 10 replications /block and used to be composited sample before analysis.

Appendix 3 Analysis of variance of photosynthetic rate, transpiration rate and stomatal resistance of nine barley genotypes under three water treatments.

Appendix 5 (continued) Path-coefficient analysis which indicated direct and indirect of some influence of variables as grain yield of barley genotypes under different water treatments (n= 81).

So that; 1) The influence of **X1** on **Y** is...

- 1.1) Direct effect from **X1** = $b'1$ = 0.26223
- 1.2) Indirect effect which passed to **X2** = $(b'2)(rx1x2)$ = 0.070742
- 1.3) Indirect effect which passed to **X3** = $(b'3)(rx1x3)$ = 0.037296
- 1.4) Indirect effect which passed to **X4** = $(b'4)(rx1x4)$ = 0.113609

$$\text{All effects of } X1 = rx1Y = 0.484$$

2) The influence of **X2** on **Y** is...

- 2.1) Direct effect from **X2** = $b'2$ = 0.36278
- 2.2) Indirect effect which passed to **X1** = $(b'1)(rx1x2)$ = 0.051135
- 2.3) Indirect effect which passed to **X3** = $(b'3)(rx2x3)$ = 0.056501
- 2.4) Indirect effect which passed to **X4** = $(b'4)(rx2x4)$ = 0.092771

$$\text{All effects of } X2 = rx2Y = 0.563$$

Appendix 5 (continued) Path-coefficient analysis which indicated direct and indirect of some influence of variables as grain yield of barley genotypes under different water treatments (n= 81).

3) The influence of X3 on Y is...

$$3.1) \text{ Direct effect from } X3 = b'3 = 0.27833$$

$$3.2) \text{ Indirect effect which passed to } X1 = (b'1)(rx1x3) = 0.035139$$

$$3.3) \text{ Indirect effect which passed to } X2 = (b'2)(rx2x3) = 0.073644$$

$$3.4) \text{ Indirect effect which passed to } X4 = (b'4)(rx3x4) = 0.13302$$

$$\text{All effects of } X3 = rx3Y = 0.52$$

4) The influence of X4 on Y is...

$$4.1) \text{ Direct effect from } X1 = b'4 = 0.28545$$

$$4.2) \text{ Indirect effect which passed to } X1 = (b'1)(rx1x4) = 0.104368$$

$$4.3) \text{ Indirect effect which passed to } X2 = (b'2)(rx2x4) = 0.117904$$

$$4.4) \text{ Indirect effect which passed to } X3 = (b'3)(rx3x4) = 0.129702$$

$$\text{All effects of } X4 = rx4Y = 0.637$$

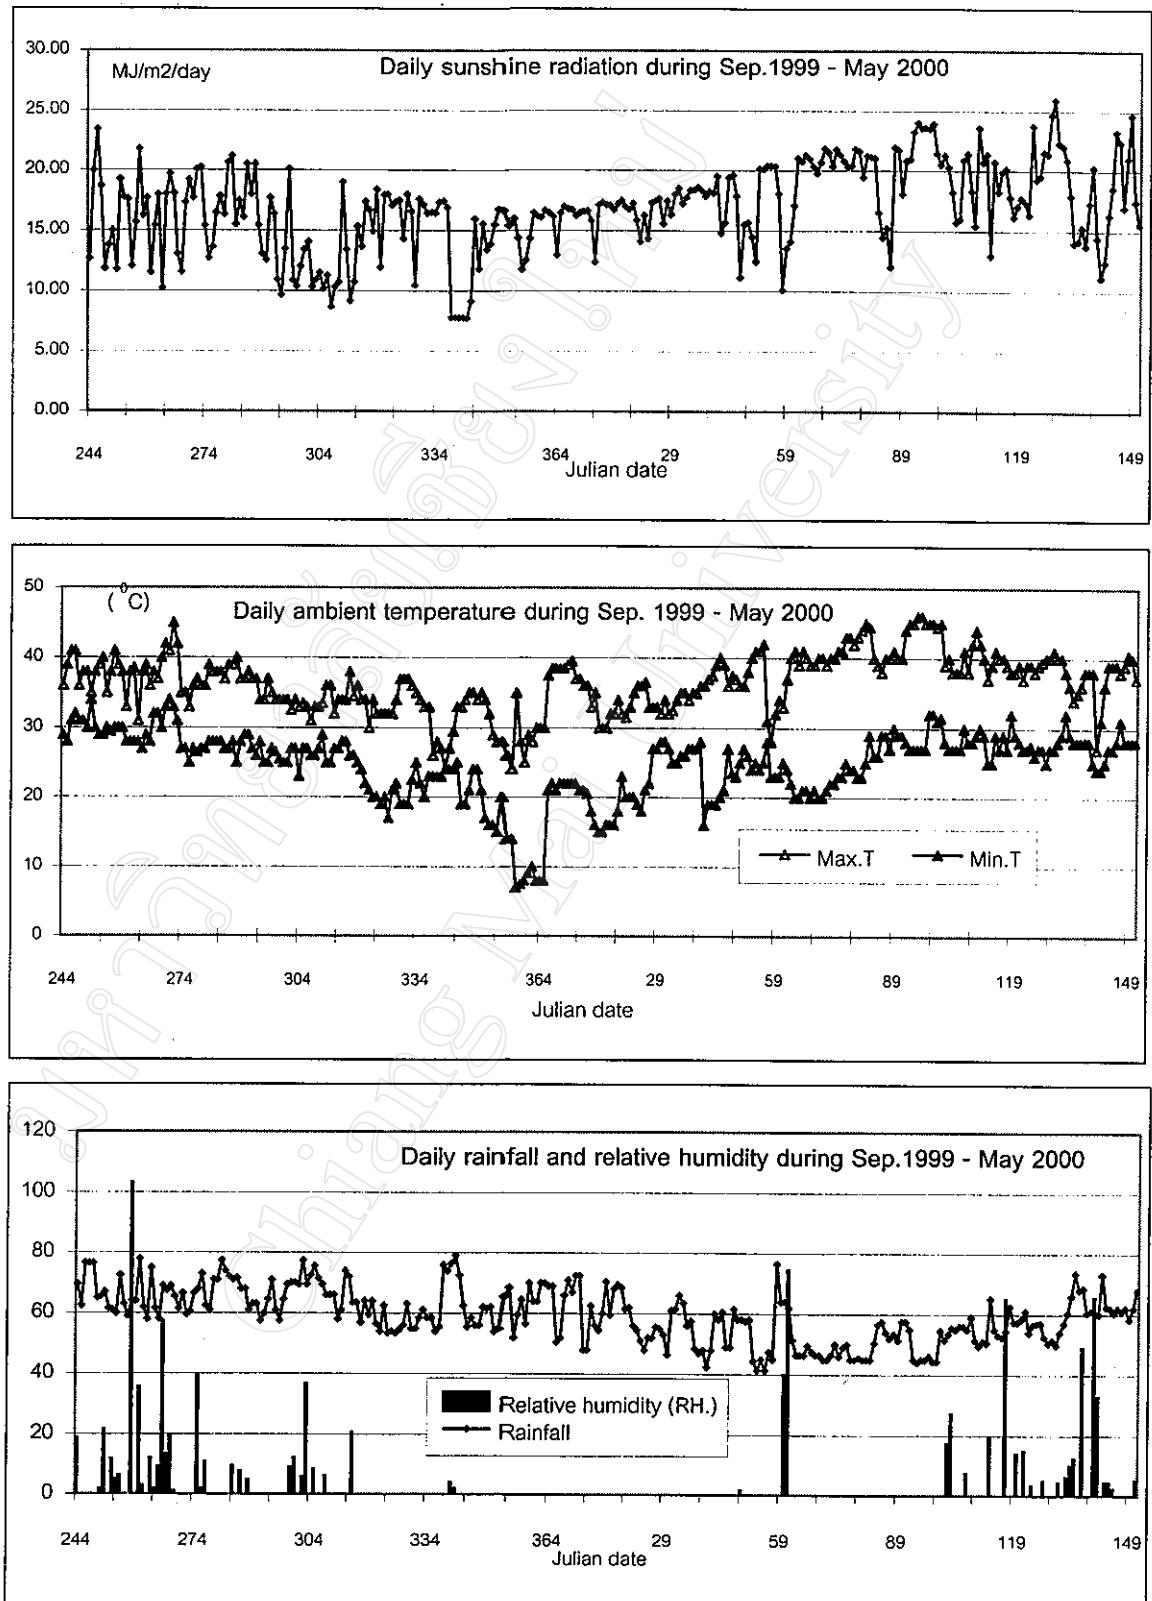

Note :

YldM or Y= Grain yield/m²; Ht or X1 = Plant height; SpkM or X2 = Spikes /m²;

Seed or X3 = Seeds /spike and TDMM or X4 = Total dry matter (g /m²).

For b'1; b'2; b'3; and b'4 were the standard partial of regression coefficient data.

and rX1Y ; rX2Y; rX3Y ; and rX4Y were the correlation matrix data.

Appendix 6 Weekly values of weathering data from September 1999 - May 2000 during the pot experiment.

Appendix 13 The standard curve of total nitrogen concentration for calculating total nitrogen in each parts of barley plant.

Appendix 14 The nitrogen ($\text{NH}_4^+ - \text{N}$) content determination from plant samples digested by Kjeldahl method.

The total nitrogen analysis of plant samples generally in Kjeldahl method (conc. H_2SO_4 + catalyst) are formed $\text{NH}_4^+ - \text{N}$ which analysed total nitrogen by distillation and titration with the exactly acid concentration. However, this procedure was short time to analysis and suitable for a lot of samples, including high accuracy and precision as the previous Kjeldahl method. Janjalernsuk *et al.* (1998) stated that this procedure, the manual colorimetric method (salicylate hypochlorite) was the highest correlation to the distillation and titration method; $r^2 = 0.996^{**}$.

Digestion by Kjeldahl method :

Mixed acid; 100 ml conc. H_2SO_4 + 100 g Na_2SO_4 + 1 g Se.

Digestion :

1. To weight 0.5 g of dry milled plant samples and fill 5 ml of mixed acid.
2. To digest the solution until having transparent solution and then adjust the solution volume with 50 ml volumetric flask.
3. To keep the degested solution in the plastic bottle with screw cap and take to analyse total nitrogen by colorimetric method.

Manual colorimetric method : as described by Supakhumnert (1998) and Janjalernsuk *et al.* (1998).

The preparation of the N1 solution : To solve 34 g sodium salicylate + 25 g sodium citrate + 25 g sodium tartate in 750 ml deionised water. And then add 0.12 g sodium nitroprusside and stir until completely solution. Adjust the total volume to be 1,000 ml with deionised water and keep in the dark bottle or in the dark.

The preparation of the N2 solution : To solve 30 g sodium hydroxide with 750 ml deionised water and keep it to be cool. And add 10 ml sodium hypochlorite (5% available Cl^-). Adjust the total volume to be 1,000 ml with deionised water and keep in the dark bottle or in the dark.

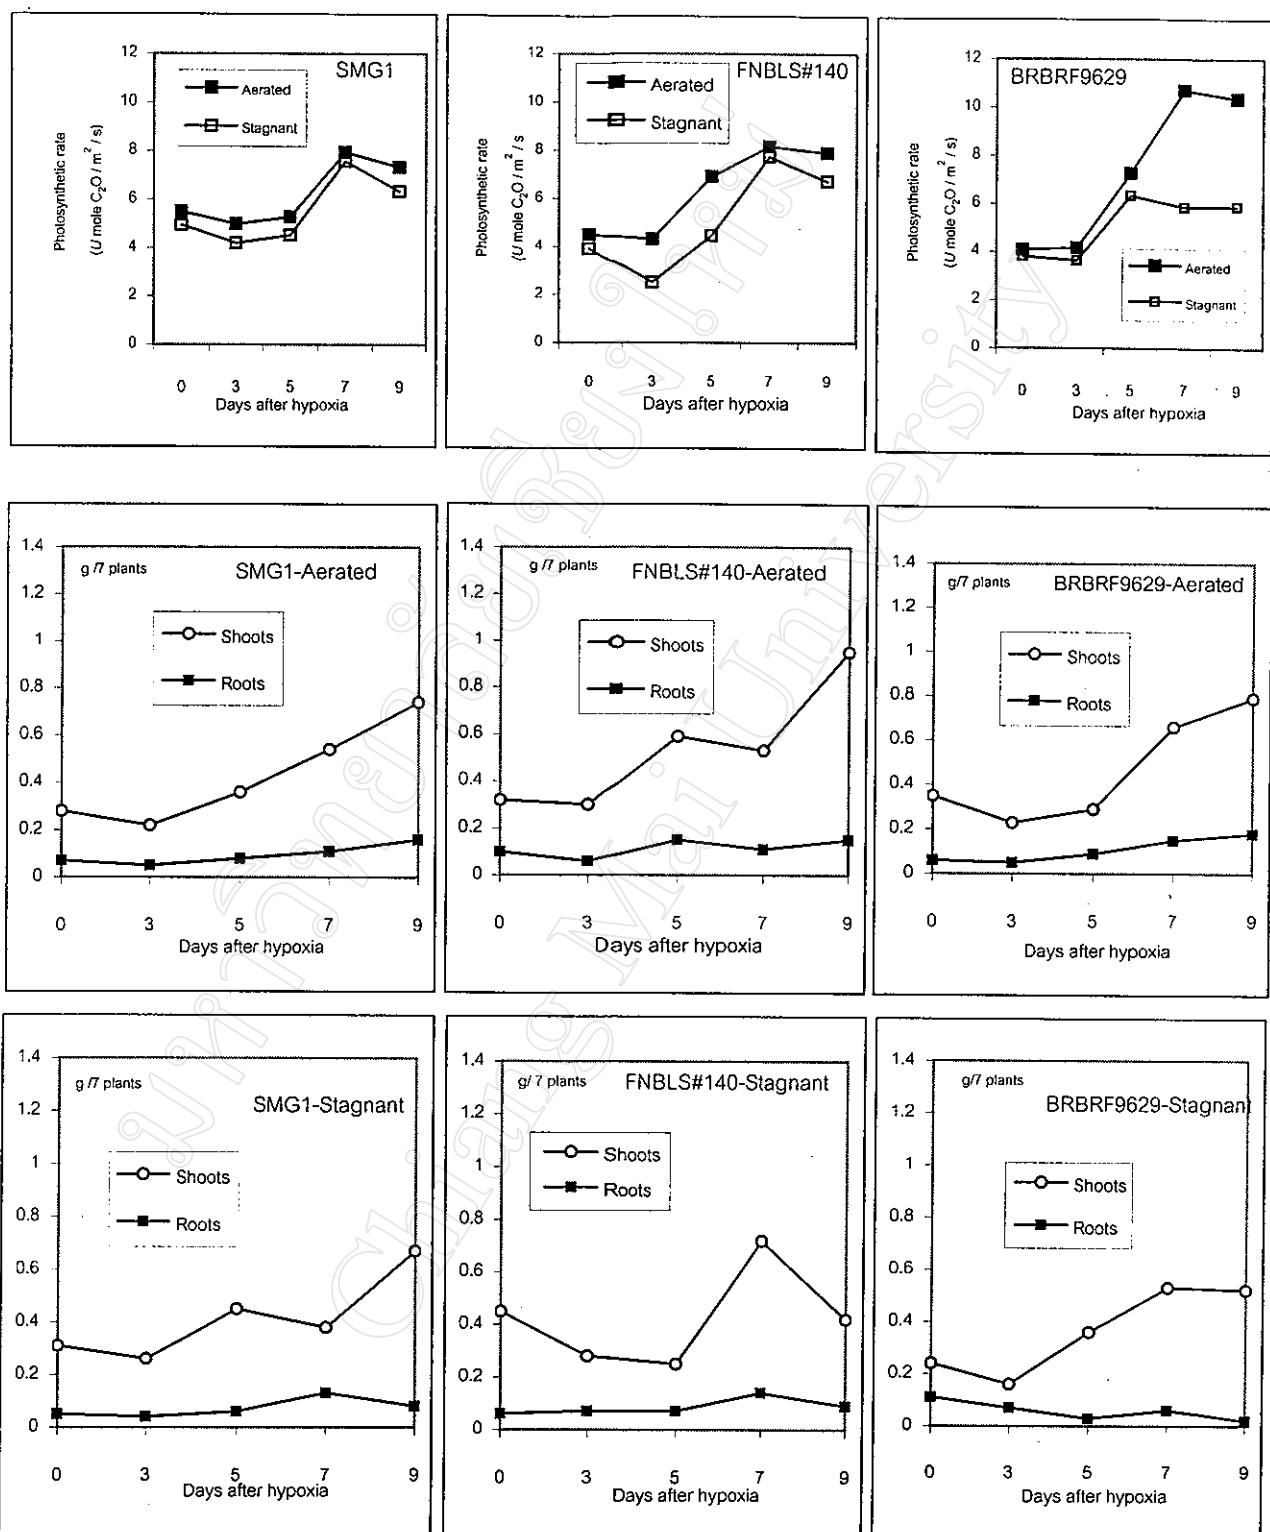

Note : The N1 and N2 solution shold be prepared before using 24 hrs.

Appendix 14 (continued)

The nitrogen (NH_4^+ - N) content determination from plant samples digested by Kjeldahl method.

The preparation of the standard concentrations : For measurement the NH_4^+ - N concentration in the digested samples, 1,000 ppm NH_4^+ stock solution will be prepared for standard curve. To solve 4.714 g of $(\text{NH}_4)_2\text{SO}_4$, dried at 105 °C before using, with deionised water in 1,000 ml of volumetric flask and keep in the refrigerator. To prepare working standard concentrations, such as 0, 5, 10, 15, 20 and 25 ppm of $(\text{NH}_4)_2\text{SO}_4$ by adding conc. H_2SO_4 for adjust equally to H_2SO_4 concentration in the digested sample solution.

Measurement : To pipette 0.2 ml of the working standard concentrations or the digested sample solution in test tubes. Add 0.5 ml of the N1 solution and stir the mixed solution and then keep for 15 min. Thus, add 0.5 ml of the N2 solution and stir the mixed solution and then keep for 1 hour or until dark green blue appearance consistently. So measure absorbance at the wave length 625 nm with Spectrophotometry.

Appendix 15 The photosynthetic rate and dry matter accumulation of barley genotypes grown in aerated and stagnant agar nutrient solution in the growth chamber at 20/15 °C (day/night temperature).

Note Data were means of four replications.
