Acknowledgements	iii
Abstract in English	v
Abstract in Thai	vii
List of Tables	xiii
List of Figures	xvi
Chapter I Introduction	1
1.1 Background	1
1.2 Agriculture	2
1.3 Statement of problem	3
1.4 Rationale	4
1.5 Objectives	6
1.6 Usefulness of the study	6
Chapter II Literature Review	7
2.1 History and distribution	7
2.2 Symptoms	8
2.3 Predisposing factors	9
2.4 Management options	10
2.4.1 Chemical control	10
2.4.2 Cultural practices	11
2.4.3 Varietal resistance	16
2.5. Extension methods	17

2.5.1 Individual farmer visit.....	18
2.5.2 On-farm trial.....	19
2.5.3 Field day.....	20
2.5.4 Farmers' training.....	21
Chapter III Research Methods.....	23
3.1 Scope and limitation of the study.....	23
3.2 Selection of study site.....	24
3.3 Sampling technique.....	25
3.4 Data collection tools.....	26
3.4.1 Secondary data.....	26
3.4.2 Primary data.....	26
3.5 Analytical methods.....	27
Chapter IV General Profile and Paddy Production System of Study Area.....	32
4.1 Physical settings.....	32
4.2 Demographic settings.....	33
4.3 Socio-economic settings.....	36
4.3.1 Land holding.....	37
4.3.2 Source of income.....	38
4.4 Institutional settings.....	39
4.4.1 Institutional facilities of the study area.....	40
4.5 Cropping pattern of the study area.....	41
4.6 Paddy production system of the study area.....	42
4.6.1 Importance.....	43
4.6.2 Paddy cultivation in the study area.....	44
4.6.3 Production and yield.....	45
4.6.4 Production constraints.....	46

Chapter V Rice Blast Management Technologies	48
5.1 Institutional linkage	48
5.2 Extension methods	51
5.2.1 Individual farmer visit	51
5.2.2 On-farm trial	52
5.2.3 Field day	53
5.2.4 Farmers' training	54
5.3. Summary of extension methods prevalent in the study area	55
5.4 Rice blast management strategies in the study area	56
5.4.1 Chemical management	56
5.4.2 Cultural practices	57
5.4.3 Varietal resistance	62
5.5 Summary of blast management technology on local varieties	64
5.6 Farmers' preference of extension methods	65
Chapter VI Factors Influencing Technological Adoption	72
6.1 Attributes of technology adoption	72
6.2 Source of information, attitude, knowledge and training on rice blast	73
6.2.1 Source of information	73
6.2.2 Farmers' attitude and knowledge on rice blast	74
6.2.3 Influence of training on rice blast	78
6.3 Land holding	80
6.4 Farmers' perception of the quality of control	81
6.5 Patterns of Adoption	83
6.5.1 Index of acceptability	84
6.6 Farmers' choice and decision criteria of technology adoption	86

Chapter VII Benefits of Adopting Blast Management Technology.....	90
7.1 Profitability of adopting technology.....	90
7.1.1 Yield.....	91
7.1.2 Input use.....	92
7.2 Comparison of cost and profitability of local and blast resistant varieties	99
7.3 Comparison of cost and profitability of using blast management technologies on local varieties	101
Chapter VIII Discussion, Summary and Recommendations.....	104
8.1 Discussion	104
8.1.1 Bio-physical environment.....	104
8.1.2 Chemical management.....	106
8.1.3 Cultural practices.....	107
8.1.4 Varietal resistance.....	111
8.1.5 Extension approaches.....	113
8.1.6 Technological attributes to adoption of rice blast management technologies	115
8.1.7 Benefits of adopting the blast management technologies.....	117
8.2 Summary.....	118
8.3 Recommendations.....	120
References.....	123
Appendices.....	141
Curriculum Vitae.....	143

List of tables

Table	Page
1. Renewable Natural Resources statistics of Bhutan.....	2
3. Matrix of cultural management practices for some pests.....	14
4. Summary of potential blast management technologies and their effect on rice blast in the temperate ecosystems	15
5. Selection criterion for the study area	25
6. Values allocated to the quality of control.....	28
7. Conversion table for ranks into scores.....	31
8. Average monthly temperature, rainfall and relative humidity of the study area, 2001.....	33
9. Composition of labor force in the study area	34
10. Demographic characteristics of the sample households by age group	34
11. Composition of sample household head by gender	35
12. Literacy of sample farming households in percentage	36
13. Operational agricultural areas under various land use types of the study area	37
14. Size and percentage of landholding of the sample households.....	38
15. Percentage of sample households' source of income	39
16. Cropping pattern of the study area.....	41
17. Rice production, area and yield of local and resistant varieties of the study area, 2002.....	46
18. Paddy production constraints in the study area (n=158).....	47
19. Percentage of sample households receiving individual farmer advice from extension agents	52
20. Sample households' participation in on-farm trials.....	53
21. Farmers' participation in different types of on-farm trial.....	53
22. Farmers' participation in the training on blast management.....	55
23. Summary of extension methods used in by the sample households (n=158).....	56

24. Farmers following chemical management.....	57
25. Planting time of local and improved varieties.....	59
26. Water management followed by the farmers.....	60
27. Fertilizer management followed by the farmers.....	60
28. Straw and stubble management followed by the farmers.....	61
29. Categorization of sample households by use of varieties.....	63
30. Comparison of paddy varieties grown by the sample households.....	63
31. Comparison of paddy varieties grown by the sample households.....	64
32. Summary of blast management by the sample households on local varieties.....	65
33. Scores allocated to ranks of extension methods to determine farmers' preference....	66
34. Scores allocated to ranks to determine extension agents' preference of extension method.....	67
35. Farmers giving ranks to different extension methods according to their preferences.....	69
36. Extension agents giving ranks to different extension methods according to their preferences.....	70
37. Source of information on rice blast management technologies.....	74
38. Farmers aware of different technologies in percentage (n=158).....	75
39. Farmers' attitude towards the recommended blast management practices.....	76
40. Farmers' adoption of recommended technologies.....	77
41. Farmers' knowledge on rice blast disease.....	78
42. Farmers' participation in the training and adoption of technology on local varieties.....	79
43. Percentage of farmers adopting the components of technology.....	80
44. Influence of wetland holding on technology adoption.....	81
45. Farmers' perceptions on the quality of control of blast management technologies ...	83
46. Summary of the index of acceptability of technologies.....	85
47. Criteria used for determining the adoption of blast management technologies.....	88
48. Summary of the yield of local and resistant varieties.....	92

49. Source of blast resistant seeds.....	93
50. Seed rate of local and resistant varieties of sample households.....	94
51. Summary of labor used for local and resistant varieties of the sample households ...	95
52. Sample households applying farmyard manure (FYM) and chemical fertilizers to local varieties.....	96
53. Sample households applying farmyard manure (FYM) and chemical fertilizers to resistant varieties.....	97
54. Summary of nutrient management of the sample households.....	98
55. Herbicide use by sample farmers to control weeds.....	99
56. Summary of gross margin analysis of local and improved varieties.....	101
57. Summary of gross margin analysis of adopting management technologies in local varieties.....	103
A 1. Group statistics and the calculated t for local and resistant varieties.....	141
A 2. Group statistics and calculated t of non-adopters and adopters of blast management technologies on local varieties.....	142

List of Figures

Figure	Page
1. Administrative map of Bhutan showing the study area.....	24
2. Dominant cropping pattern in the wetland-based farming system of the study area....	42
3. Land use types in the study area in percentage based on the sample survey, 2002.....	45
4. Comparison of scores allocated by farmers and extension agents on extension methods.....	68
