ACKNOWLEDGMENT

I would like to express my deep gratitude to a number of people who supported and inspired my work on this thesis. Without them this would not have been possible.

Assoc. Prof. Puntipa Pongpiachan, my major advisor, for her constant support and guidance throughout the course of this work. Her valuable expertise, advice, and encouragement made this work possible

Dr. Wonnop Visessanguan, my co-advisor, for his guidance, kindness, invaluable advice, supervision, suggestion, proof reading and constant encouragement throughout the years of the work.

My grateful thanks are due to Dr. Pongsuda Pongtanya, external examiner, for her valuable suggestions and friendship, concern in my work and technical advice during the course of my research.

I would like to express my sincere thanks to Veterinarian Wiwat Chunraksa, who provided feeds, piglets and experimental space for the field test. Without his support, this thesis would not have been possible.

I would like to thank all the staff members of the Food Biotechnology Laboratory of the National Center for Genetic Engineering and Biotechnology (BIOTEC), Thailand, for his or her help and encouragement. They were always nice and friendly.

I also thank my colleagues of the M.S. student 2000-2003 class in Department of Animal Science, Faculty of Agricultural, Chiangmai University, Thailand for sharing experiences and knowledge during the time of study.

Furthermore, I would like to take this opportunity to thank the National Center for Genetic Engineering and Biotechnology (BIOTEC) for the graduate scholarship.

I would like to thank my father, Muang yarchai, and my mother, Sreenual Suwannayos, who supported me in every aspect of my education. I want to acknowledge their love and devotion to provide me with the opportunity to have the best education possible.

Finally, I would like to thank Wilasinee Khiannok, Montri Punyatong, Tawatchai Teltathum, Kuanchai Dechosawang, especially Wanaporn Tapingkae for their help during my work.

Mongkol Yarchai
