

Table of Contents

	Page
Acknowledgement.....	ii
Abstract in English.....	iv
Abstract in Thai.....	vi
List of Tables.....	xi
List of Figures.....	xiii
Chapter I. Introduction.....	1
1.1 Background.....	1
1.2 Common pool resources (CPRs).....	2
1.3 Rationale.....	5
1.4 Objectives.....	8
1.5 Scope of the study.....	8
Chapter II. Literature review.....	9
2.1 Conflicts in water use and management.....	9
2.2 Institutions for resource management.....	14
2.3 Participatory methods.....	16
2.4 Multi-agent systems modeling and role-playing games.....	20
2.5 Synthesis of the literature review.....	24
Chapter III. Research methods.....	27
3.1 Conceptual framework.....	27
3.2 Setting.....	28
3.3 Study site.....	30
3.4 Sampling technique.....	33
3.5 Data collection.....	33
3.6 Data analysis.....	35
3.7 Role-playing game.....	36
3.8 MAS modeling.....	41
3.9 Overview of the methods.....	43

Chapter IV. Watershed and farming systems characterization and diagnosis.....	44
4.1. Agroecological zonation and characterization of Lingmteychu watershed.....	45
4.2. Cropping systems.....	53
4.3. Socio-economic features.....	56
4.4. Differentiation among farming systems	61
4.5 Summary	70
 Chapter V. Role gaming sessions in Dompola	 71
5.1. Knowledge representation and its validation by the players	71
5.2. Improvements suggested by the players	73
5.3. Learning experiences	73
5.5. Understanding the decision-making process and its impact on resource use	75
5.6. Performance of irrigation system.....	85
5.7 Summary.....	88
 Chapter VI. MAS modeling in Limbukha	 90
6.1 Model structure: Class diagram	90
6.2 Model dynamics: Behavior of agents	96
6.3 Organization of interactions.....	100
6.4 Data integrations.....	105
6.5 Checking the model	107
6.6 Scenarios.....	109
6.7 Discussion.....	118
 Chapter VII. Conclusion and recommendations.....	 119
7.1 Conclusion	119
7.2 Recommendations.....	122
7.3 Further research issues.....	123
 References.....	 125
APPENDIX.....	134
Appendix 1. Source codes of Limbukha model.....	134

Appendix 2. Rainfall pattern used in Limbukha model.....	141
Appendix 3. Data generated from 36 scenarios of Limbukha Model.....	142
CURRICULUM VITAE.....	145

List of Tables

Tables	Page
1. Annual harvest of CPRs (wood and non-wood forest products) in Bhutan, 2000...3	
2. Characteristics of dispute resolution techniques.....	11
3. Dispute factor classification scheme.....	12
4. Dimensions of rural development participation.....	18
5. Classification of types of participation based on the linkages among actors	19
6. Similarities between role games and MAS.....	22
7. Category and number of players from Limbukha and Dompola for RPG.....	33
8. Land use by village in the Lingmuteychu watershed, 2001.	49
9. Crop varieties and their potential yields in Lingmuteychu watershed, 2002.....	54
10. Educational background and occupation of people in two villages of Lingmuteychu watershed, 2003	56
11. Household and population density of different villages in Lingmuteychu watershed, 2002.	57
12. Sources of annual income for water sharing categories in Limbukha and Dompola, 2003 crop year (in US\$).....	60
13. Utilization of annual income among water sharing categories of people in Limbukha and Dompola villages. 2002 crop year	61
14. Historical profile of Lingmuteychu watershed.	62
15. Share of irrigation water used by different farm types in two villages of Lingmuteychu watershed.....	69
16. Lesson learned by farmers from two sessions of RPG played in Dompola in May and December, 2003.	75
17. Kinship structure among players	78
18. Attributes of the elementary spatial in Limbukha Model	91
19. Attributes of passive object “Market”	93
20. Attributes of social agent (Farmer) in Limbukha model.	95
21. Instances of message subclass and their corresponding message used in Limbukha model	99
22. Allocation of blocks and plots to each communicating agent.	106

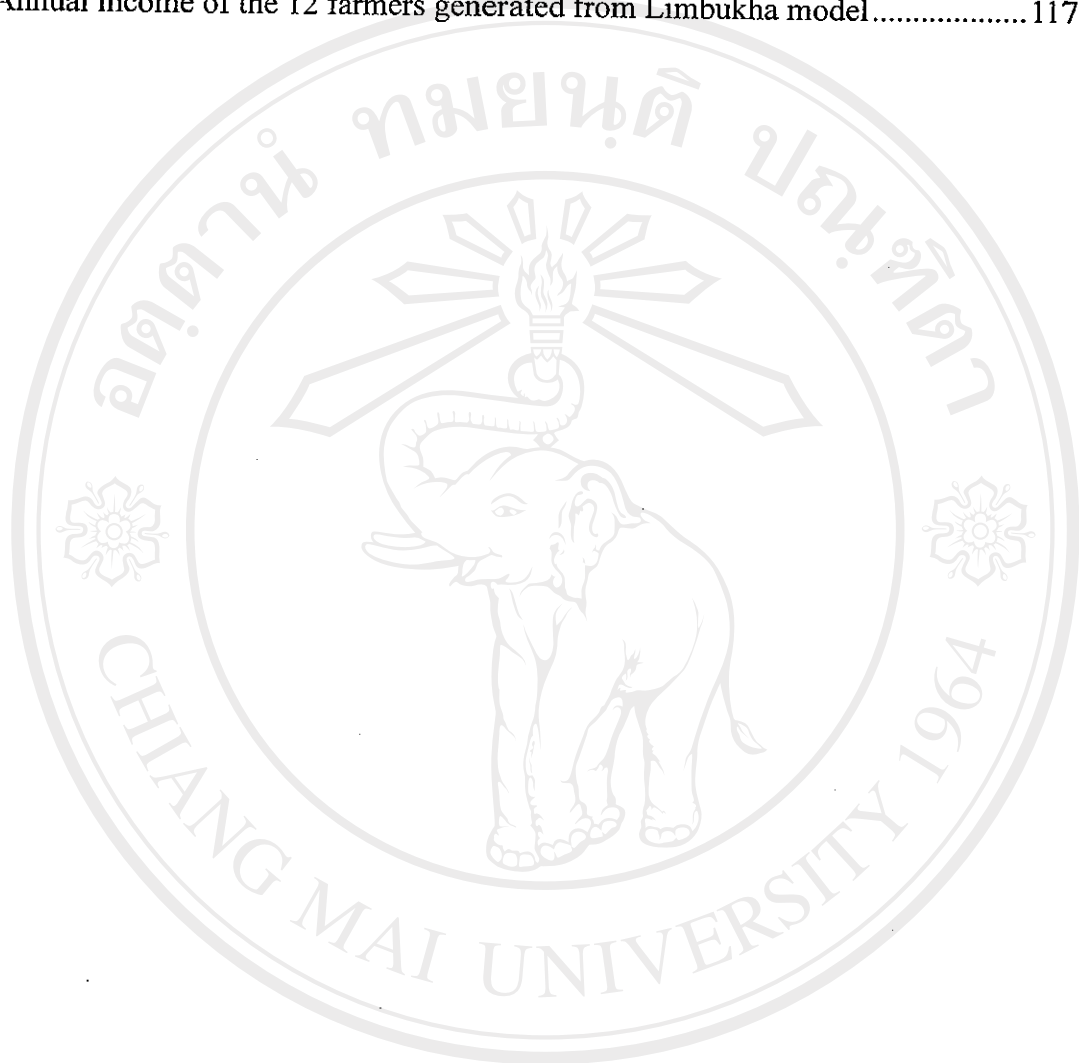

23. Possible scenarios to be simulated with the Limbukha model.	110
24. Classification of scenarios based on thresholds of six criteria and conditions. ...	112
25. Proportion (%) of scenarios under different levels of viability range based on three types of social networks.	113
26. Frequency of scenarios for test of independence between social network and income categories.	113
27. Frequency of scenarios for test of independence between exchange protocols and income categories.	114
28. Frequency of plots for test of independence between social network and land use categories.	114
29. Frequency of plots for test of independence between exchange protocols and land use categories.	115
30. Description of six selected scenarios from Limbukha model.	115

List of Figures

Figures	Page
1. Conflict mode matrix	13
2. Multi-agent system general organization and principles.	21
3. Schematic representation of conceptual procedure used in this study.....	27
4. Map of the study area in Lingmuteychu watershed, Punakha District, Bhutan.....	31
5. Diagrammatic representation of the Dompola role-playing game.....	37
6. Game board of Limbukha village used in Dompola RPG, May 2003.....	38
7. Cards used in the RPG in Limbukha	39
8. MS Excel Spreadsheet used in the Dompola RPG.	40
9. Structure of the main interface of the CORMAS simulation platform.....	42
10. Distribution of watershed area by altitude.	45
11. Distribution of watershed area by slopes.	46
12. Soil map of Lingmuteychu watershed.	47
13. Land use map of Lingmuteychu watershed, 2002.	50
14. North-south longitudinal transect line of Lingmuteychu watershed. 2003.	51
15. Schematic representation of the network of irrigation channels in Lingmuteychu watershed.	52
16. Crop types and share of cropped farmland in Lingmuteychu watershed in 2002.	53
17. Cropping patterns in relation to climatic factors in two upstream villages of Lingmuteychu watershed.....	55
18. Sketch map of road and tracks in Lingmuteychu watershed	59
19. a. Schematic representation of the functioning of four types of farming systems in upper catchment of Lingmuteychu watershed.....	65
20. Preliminary results and players discussing the results, May 2003	74
21. Lessons learned by players from 2 gaming sessions, May and December 2003 ...	75
22. Land use patterns in Limbukha (a) and Dompola (b) during intra-village communication mode, May 2003	77
23. Water use dynamics in Limbukha (a) and Dompola (b) following intra-village communication mode.....	79
24. Farm labor use in Limbukha and Dompola during Intra-village game	80

25. Land use patterns in Limbukha and Dompola under the inter-village communication mode, May 2003	81
26. Water use dynamics in Limbukha (a) and Dompola (b) following inter-village mode of communications, December 2003	82
27. Excess labor in Limbukha and Dompola during inter-village communication mode, December 2003	83
28. Income variation among farmer categories according to two modes of communication, December 2003	84
29. Gross margin per hectare of cropped area (US\$ ha ⁻¹) in Limbukha and Dompola generated from RPG, December 2003.	86
30. Gross margin per hectare of command area (US\$ ha ⁻¹) in Limbukha and Dompola generated from RPG, December 2003	87
31. Gross margin per unit of irrigation water supplied (US\$ m ⁻³) in Limbukha and Dompola generated from RPG, December 2003	88
32. Class diagram of Limbukha Model.....	92
33. Cormas window showing details of exchanges, Limbukha model.....	94
34. Process to decide crop succession in the Limbukha Model.....	96
35. Process to calculate water and labor demand in Limbukha model.....	97
36. plantPotato task in Limbukha model	97
37. plantRice task in Limbukha model	97
38. Protocol for exchange of water and labor	100
39. Sequence diagram of Limbukha model (Cycle-1).....	103
40. Sequence diagram of Limbukha model (Cycle-2).....	104
41. Synthetic Environment of Limbukha Model	105
42. Communication observer of CORMAS showing the exchange of water between agents in Limbukha Model.	106
43. Test of Limbukha base model indicating (a) rice plots, (b) potato plots, (c) excess irrigation water, and (d) fallow plots generated from 3 simulations.	108
44. Test of Limbukha base model showing annual income (d) generated from 3 simulations.	109
45. Protocols (a) P1, (b) P3, and (c) P5 used for scenario analysis	111
46. Units of unused irrigation water in 6 scenarios, Limbukha model.....	116

47. Units of water exchanged in 6 scenarios, Limbukha model	116
48. Number of plots planted with rice in 6 scenarios, Limbukha model	117
49. Number of fallow plots in 6 scenarios, Limbukha model.....	117
50. Annual income of the 12 farmers generated from Limbukha model.....	117
