## ACKNOWLEDGEMENTS

This study was supported by The Royal Golden Jubilee Ph.D. Program, The Thailand Research Fund and financial fund from of Agronomy Department, Faculty of Agriculture, Chiang Mai University.

First, for the opportunity of a lifetime, for making it possible to start on this Ph. D. program, thanks are due to Professor Dr. Chuckree Senthong. He served as my major professor and provided constant motivations and questions on the conduct of this study.

My graduate committee members have been very helpful throughout the conduct of this study. I thank Assoc. Prof. Dr. Keith T. Ingram, Assoc. Prof. Dr. Dumnern Karladee and Assoc. Prof. Dr. Sombat Srichuwong. They have provided a thorough analysis of my research proposal and identified which experiments are doable within the limited time of this study. Dr. Keith T. Ingram had kept me busy looking for solutions and had trained me to do independent research work. I also want to thank him for his swift review of this manuscript, for his attention to detail and patience for editing several revisions of the manuscripts.

I thank all my professors in the course I have taken, for the knowledge, training and discipline they have instilled in me.

There have been many people whom I consulted in this study, and they have been very cooperative and very helpful. I also thank Assist. Prof. Dr. Sawit Meechoui at Lampang Agricultural Research and Training Centre for his advice and gave me the

suggestion about the plant physiology. And I am grateful to Mr. Dacha Numjam for his help on field experiment at Lampang Agricultural Research and Training Centre. The Georgia Envirotron, Crop and Soil Sciences, and Plant Pathology Department at Georgia Experiment Station in Griffin provided excellent staff and very conducive locations for conducting this research. I am thankful to the staff who had provided assistance during the conduct of this study. This group includes: Kathy Cole-Evans, Gary A. Leers, Ray Pitts, Leigh Robicheaux and David Spradlin. I am grateful to Leigh Robicheaux, who helped with the field research, and to Gary A. Leers who helped with computer programming and operations. I also thank Gary Payne and Jeffrey Carey for allowing the use of the green fluorescent protein (GFP) *Aspergillus flavus* strains that they developed.

Thanks to the Crop and Soil Sciences Department, College of Agricultural and Environmental Sciences, University of Georgia and the Agronomy Department, Faculty of Agriculture, Chiang Mai University for providing assistantship and support to conduct the experiments.

Thanks to all friends at Plant Breeding Lab, Ms. Chompunut Chayawat, Ms. Jarunee Pilumwong, Ms. Natchaya Pinginta, Ms. Sarita Yoopum and Mr. Prachan Chanpengphat for their help and encouragement. And I also thank Mr. Teerasak Rungcharearn for the advice about the computer software and many computer programs.

Finally, I also thank my mother, my younger brother and my cousins for their patience and encouragement during many years of this Ph. D. study.
