## ACKNOWLEDGEMENTS

I would like to express my sincere gratitude to my supervisor Assoc. Prof. Dr. Chaiwat To-anun for the continuous support of my Ph.D. study and research, for his valuable guidance, immense knowledge, supervision, and generosity.

My sincere thanks also go to Prof. Dr. Susumu Takamatsu, Faculty of Bioresources, Mie University, Japan, who had invaluable supporting, advice and sharing knowledge in powdery mildews fungi, especially in molecular work, and their valuable assistance for the use of facilities in plant pathology laboratory at Mie University.

I am greatly indebted to co-supervisor; Lect. Dr. Sarunya Valyasevi for kindness, suggestion and her valuable comments. I also thank Assoc. Prof. Dr. Kasem Soyong, Assoc. Prof. Dr. Nuchnart Jonglaekha and Lect. Dr. Ratchadawan Cheewangkoon for any advice and critical comments.

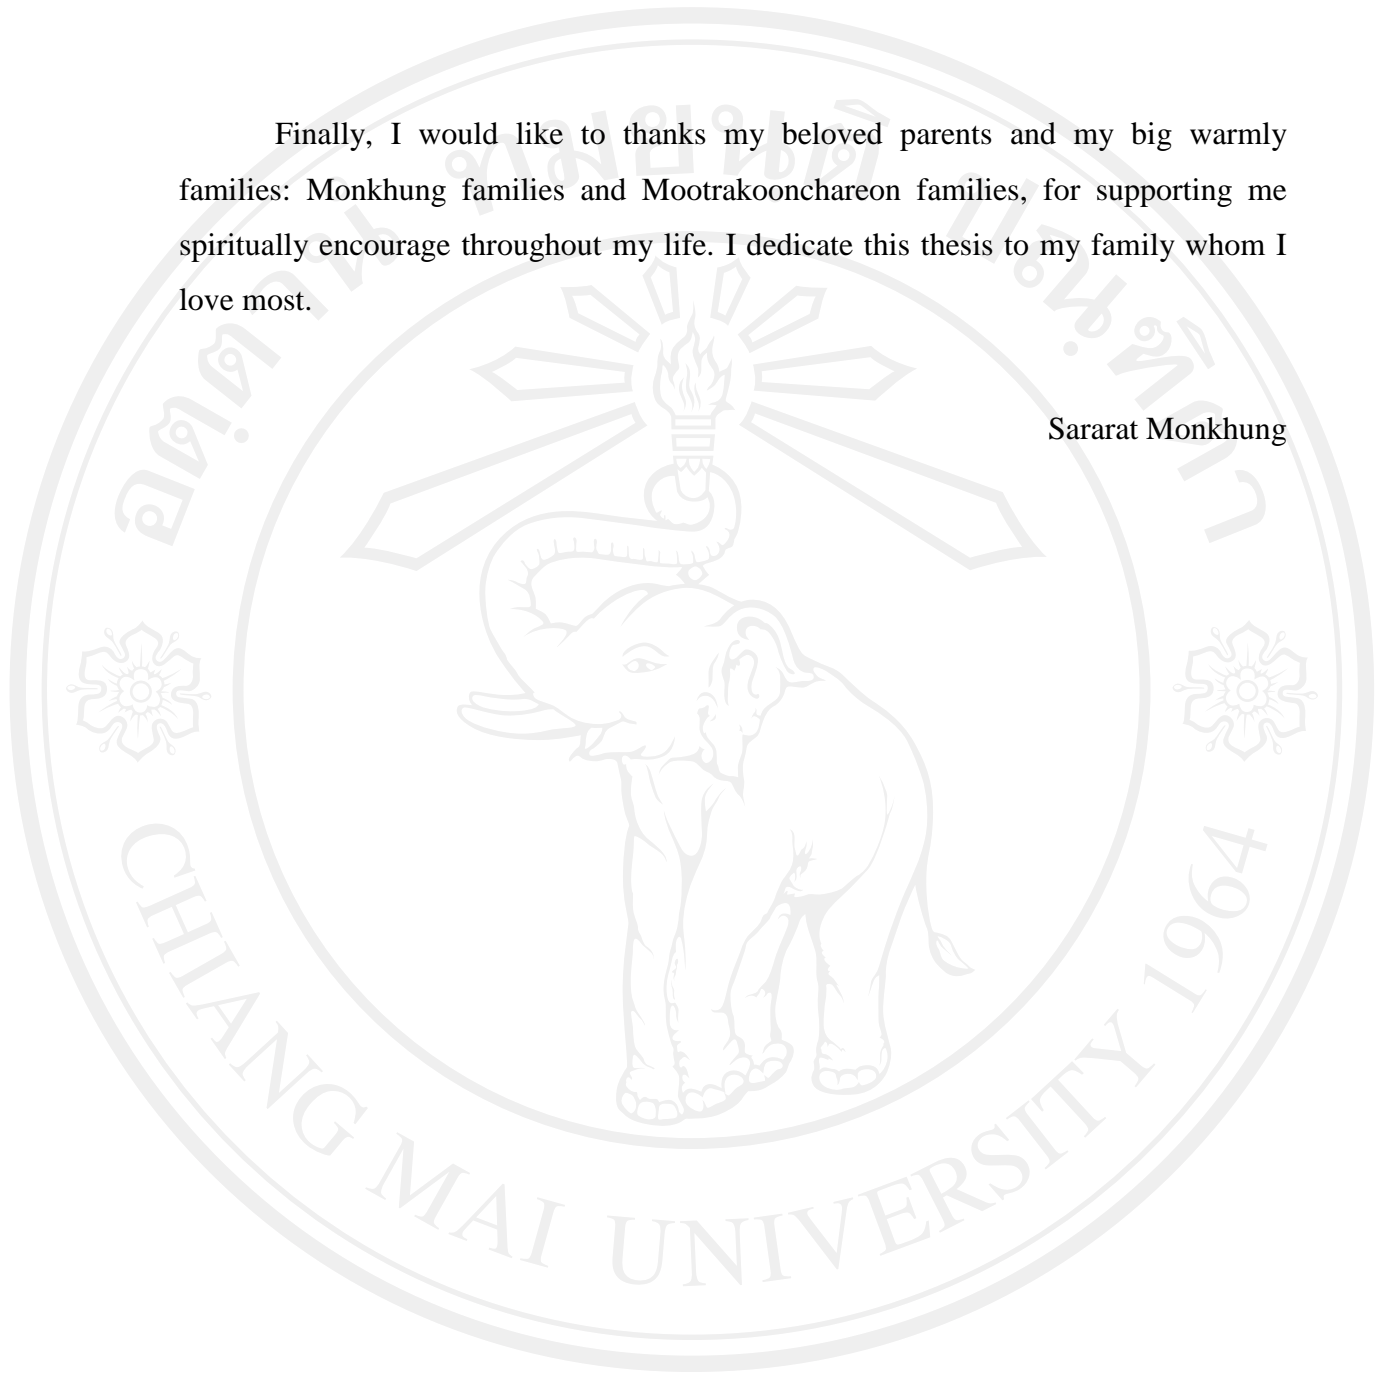

I also would like to thank Mr. J. F. Maxwell, the curator of CMU Herbarium, Faculty of Biology, Chiang Mai University for his helpful identification of the host plant.

I would like to acknowledge the Royal Golden Jubilee (RGJ) scholarship for financial support.

I also wish to thank my molecular laboratory members in Division Pathology, Faculty of Agriculture, Chiang Mai University, Thailand and laboratory members in plant pathology laboratory at Mie University, Japan for their encouragement and helping me in many ways.

Finally, I would like to thanks my beloved parents and my big warmly families: Monkung families and Mootrakoonchareon families, for supporting me spiritually encourage throughout my life. I dedicate this thesis to my family whom I love most.

Sararat Monkung
