ACKNOWLEDGEMENTS

I would like to express my sincere gratitude to my supervisor Professor Nithiya Rattanapanone for providing me the opportunity to do a Ph.D. I am also really grateful to Professors Don Grierson and Andy Taylor to have welcomed me in their renowned research group at the University of Nottingham and for their guidance and valuable advices throughout my work. I would like to thank the thesis examining committee: Dr. Imad A. Farhat, Prof.Dr. Saichol Ketsa, Assoc.Prof.Dr. Maneechat Nikornpun and Dr. Pensiri Sriburi.

I am extremely grateful to all the people in Plant Sciences Laboratory (A49) for their advices and willingness to help for my practical work in molecular technique: Dr. Lucille Alexander, Dr. Chen Guoping, Dr. Li Hongying and Dr. Yuanhuai Han. Many thanks also go to Steve Stockley, Sue and Martin for their help in growing tomato plants. I also thanks to the staff in Food Sciences Division, Phil Glover and Mike Chapman for helpful technical assistance, Dr. David Gray for providing me lipoxygenase assay, Dr. Rob Linforth for his help with inspirational ideas for my experiments. Special thanks must also go to Dr. Fabinne Boukobza for her kind and willing help, without whose valuable help this work would not have been possible. Many thanks also go to my friends both in Plant Sciences and Food Sciences Divisions, in particularly Dr. O for the multicultural experiences and good moments shared making life in Sutton Bonington very pleasant and enjoyable.

The Ph.D. scholarship sponsored by the Royal Thai Government is gratefully acknowledged. Special appreciation to my colleagues for your continued friendship.

Finally, but most importantly, the biggest thanks go to my parents and my sister for all their encouragement with love throughout the years of study and during the tough times.
