ACKNOWLEDGEMENTS

I wish to express my gratitude and deepest appreciation to Associate Professor Nantaya Chanarat, with whom was advisor, for her excellent guidance, patience, valuable advices and constant encouragements throughout this thesis.

My heartfelt thanks go to Associate Professor Maitree Suttajit, Ph.D, Department of Biochemistry, Faculty of Medicine, Chiang Mai University and Lecturer Prasit Chanarat, Department of Clinical Microscopy, Faculty of Associate of Medical Sciences, Chiang Mai University, for their kindness, valuable suggestions and many helpful advices.

I also wish to extent my appreciation to my respective institutions; Clinical Pathology section, Buddhachinaraj Hospital and also my head-officer, Khun Mujarin Tiloklert, for her kindness and making it's possible for me to take the chance to study.

I am very thankful to all the staff members in the Department of Clinical Chemistry, Faculty of Associate of Medical Sciences, Chiang Mai University, for thier excellent instruction and training. Their teaching and suggestions during the coursework that were very helpful for understanding and analyzing this thesis.

A very special thank you goes to all of the staffs at Clinical Pathology section, Buddhachinaraj Hospital, for their sincerely helps in collected serum & urine in Diabetics care unit and also normal healthy serum & urine.

Many thanks to all my friends for their kindness, encouragements and friendship.

Finally, my overriding debt is to my family who provided me for being so understanding about, supportive of this thesis that took away much of the time and inspiration needed to do this thesis.

Without whose helps and encouragements above, this thesis would have never become a reality.
