

TABLE OF CONTENTS

	PAGE
ACKNOWLEDGEMENT	iii
ENGLISH ABSTRACT	iv
THAI ABSTRACT	vi
LIST OF TABLES	xii
LIST OF FIGURES	xiii
ABBREVIATIONS	xiv
CHAPTER I: INTRODUCTION	
1. Rationale	1
2. Operational definition	3
3. Purposes of the study	4
4. Hypotheses of the study	4
5. Advantages of the study	4
CHAPTER II: LITERATURE REVIEWS	
1. Characteristics of normal gait	5
2. Characteristics of gait in patients with hemiplegia	10
3. Gait rehabilitation in patients with hemiplegia	12
3.1 Traditional physiotherapy	12
3.2 Treadmill training	13
3.3 Functional electrical stimulation	14
3.4 Orthosis	26

3.5 Electro-orthosis system	29
-----------------------------	----

CHAPTER III: METHODS

1. The development of the knee electro-orthosis	37
1.1 Components of the knee electro-orthosis	38
1.2 Functional association of the switch sensor, the knee orthosis, and muscle stimulation	42
2. Investigating the effect of the knee electro-orthosis on gait parameters	45
2.1 Participants	45
2.2 Study design	46
3. Equipments	48
4. Procedures	48
5. Data acquisition and analysis	49
6. Statistical analysis	50
7. Location	50

CHAPTER IV: RESULTS

1. Pilot study	51
1.1 Participants of the pilot study	51
1.2 Gait parameters of the pilot study	52
1.3 Knee angle of the pilot study	52
2. Main study	53
2.1 Participants of the main study	53
2.2 Gait parameters of the main study	54
2.3 Knee angle of the main study	54

2.4 The results of normal knee alignments group 57

2.5 The results of knee hyperextension group 61

CHAPTER V: DISCUSSION

1. The knee electro-orthosis and a switch sensor 63

2. The gait parameters in normal knee alignment walked
without the KEO and with the KEO 65

3. The gait parameters in normal knee alignment walked
without the KEO and with the KO 66

4. The gait parameters in normal knee alignment walked
with the KO and with the KEO 67

5. The gait parameters between normal knee alignment
and knee hyperextension group 68

6. The mechanism of the KEO to improve gait performance 69

7. The knee angle at the mid stance 71

CONCLUSION 73

CLINICAL APPLICATION 74

LIMITATION 75

FUTURE STUDY 76

APPENDICES

APPENDIX A	Assessment form	87
APPENDIX B	Functional Ambulation Category	88
APPENDIX C	Modified Ashworth Scale	89
APPENDIX D	Details of the pilot study participants	90
APPENDIX E	Details of the main study participants	91
APPENDIX F	GAITRite® system automates	92
APPENDIX G	Satisfaction questionnaire	93
APPENDIX H	Detail of study for participants	94
APPENDIX I	Consent form	97
CURRICULUM VITAE		98

LIST OF TABLES

TABLE	PAGE
1 Knee function for each gait phases	9
2 Parameters of FES for walking	21
3 Parameters of hybrid system	23
4 The stimulation period and the stimulated muscles of the KEO which is controlled through the knee switch sensor	43
5 The stimulation period and the stimulated muscles of the KEO which is controlled through the foot switch sensor	44
6 Demographic information of the pilot study participants	51
7 The gait parameters of the pilot study	52
8 The knee angle of the pilot study	53
9 Demographic information of the main study participants	54
10 The gait parameters of the main study	55
11 The knee angle of the main study	55
12 The characteristics of the both groups' participants	57
13 The gait parameters of normal knee alignment group	58
14 The knee angle of normal knee alignment group	58
15 The gait parameters of knee hyperextension group	61
16 The knee angle of knee hyperextension group	62

LIST OF FIGURES

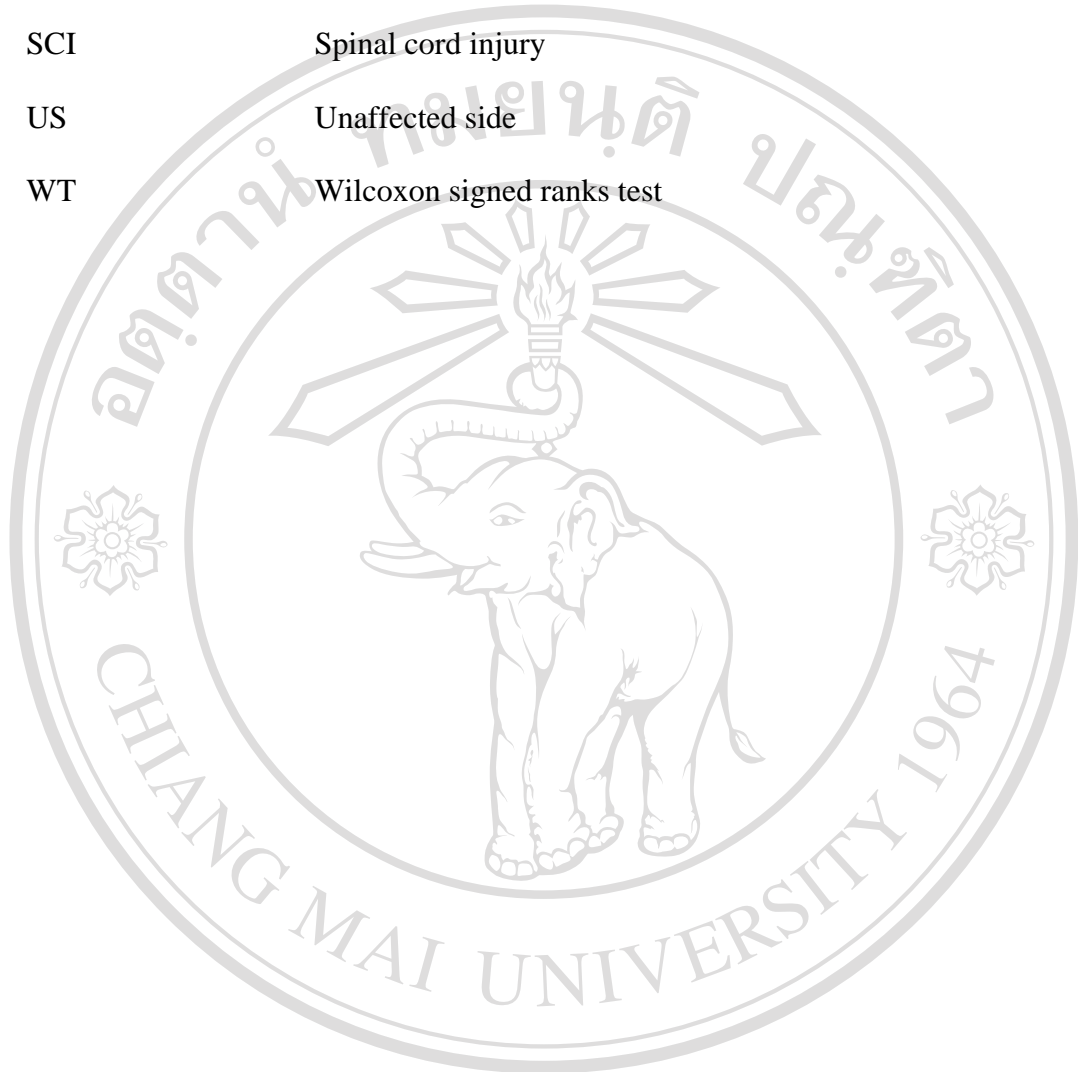

FIGURE	PAGE
1 Human walking gait through one cycle	6
2 Orthosis knee joint often used in KAFO	27
3 A hybrid FES with Walkabout and percutaneous FES	30
4 Akita knee joint	31
5 The knee locker in stance and swing phase	32
6 The developed knee electro-orthosis system	37
7 The developed electrical stimulator	38
8 The developed knee electro-orthosis system on the patient	40
9 The developed offset knee orthosis with the knee switch sensor	40
10 The developed knee switch sensor	41
11 The developed foot switch sensor	42
12 Flowchart of participants through the study	47
13 The mean velocity and cadence of knee normal alignment group	59
14 The means of step length of normal knee alignment group	59
15 The means of swing time of normal knee alignment group	60
16 The means of stance time of normal knee alignment group	60

ABBREVIATIONS

ADL	Activities of daily living
AFO	Ankle foot orthosis
AKJ	Akita knee joint
AS	Affected side
BFSH	Bicep femoris short head
BWS	Body weight support
CBO	Controlled-brake orthosis
CVA	Cerebrovascular accident
FAC	Functional ambulation category
FES	Functional electrical stimulation
FT	Friedman test
GC	Gait cycle
KAFO	Knee ankle foot orthosis
KEO	Knee electro-orthosis
KO	Knee orthosis
Lt	Left side
MAS	Modified ashworth scale
MFES	Multichannel functional electrical stimulation
MMLO	Moorong medial linkage orthosis
ODFS	Odstock dropped foot stimulator
PCI	Physiological cost index
