ACKNOWLEDGEMENTS

I am grateful to express my sincere gratitude and appreciation to my advisor, Assistant Professor Dr. Ratchada Cressey, for her excellent guidance and continuous discussion. Without her support and sincerity this thesis would not come to light.

Also I thank my co-advisor, Assistant Professor Dr. Chatchai Tayapiwatana, Department of Clinical Immunology, Faculty of Associated Medical Science, for his help and generosity in materials and instruments.

I gratefully acknowledge the financial support from the National Center for Genetic Engineering and Biotechnology (BIOTEC) and Associate Professor Dr. Watchara Kasinrerk for his leadership which enables us to get this support.

I thank Dr. Ville Santala (University of Turku, Finland) for providing pAK400 vector and also I thank Dr. John Lunec (Northern Institute for Cancer Research: NICR) for providing the p53 encoding DNA clone.

Many special thanks are also extended to my dear friends at the faculty of Associated Medical Sciences, Chiang Mai University, for their help and warm friendship.

In addition, my hearts filled with thanks go to my parents for their love, patience, understating and encouragement throughout my study.

I thank the staff of the Department of Clinical Chemistry, Faculty of Associated Medical Science for their support in providing instruments, a convenient performing and collecting specimens in this study.
