	PAGE
ACKNOWLEDGEMENT	III
ABSTRACT (in English)	IV
ABSTRACT (in Thai)	V
TABLE OF CONTENTS	VII
LIST OF TABLES	X
LIST OF FIGURES	XI
CHAPTER 1 INTRODUCTION	1
1.1 Rationale	1
1.2 Purpose of the study and hypothesis	3
1.3 Advantage of the study	3
CHAPTER 2 LITERATURE REVIEW	4
2.1 Therapeutic ultrasound	4
2.2 The effect of therapeutic ultrasound on neural function	7
2.3 Thermal perception threshold	8
2.3.1 Cold and warm receptors	8
2.3.2 Thermal receptors proteins	10
2.3.3 Transmission of thermal signals	11
2.4 Quantitative sensory testing	13
2.4.1 Introduction	13
2.4.2 Method of limits	14
2.4.3 Method of levels	15

2.5 Factor affecting thermal perception threshold and thermal pain threshold	16
2.5.1 Gender of subjects	16
2.5.2 Age	17
2.5.3 Gender of experimenter	17
2.5.4 Body region	18
CHAPTER 3 MATERIAL AND METHODS	20
3.1 Research design	20
3.2 Participants	20
3.3 Variables	21
3.3.1 Independent variables	21
3.3.2 Dependent variables	21
3.4 Equipments	22
3.5 Experimental setup	22
3.5.1 Ultrasound unit	22
3.5.2 Thermal detection thresholds	24
3.6 Experimental protocol	26
3.7 Statistical analysis	28
CHAPTER 4 RESULTS	30
4.1 Demographic characteristics of the participants	30
4.2 Stability of thermal perception thresholds testing on three time intervals	30
4.3 The effects of therapeutic ultrasound on thermal perception thresholds	31
4.3.1 Cold detection thresholds (CDTs)	31
4.3.2 Warm detection thresholds (WDTs)	32

CHAPTER 5 DISCUSSION	34
5.1 Stability of thermal perception threshold	34
5.2 Effect of ultrasound on thermal perception threshold	36
5.3 Limitations of the study	39
5.4 Conclusion	39
References	40
APPENDIX	46
APPENDIX A Six possible orders of the three modes of ultrasound	47
CURRICULUM VITAE	48

LIST OF TABLES

TABLE	PAGE
4-1 Demographic characteristic of the participants (N=30)	30
4-2 Summary of log- transformed data of CDTs and WDTs at 0 minute (LG-0 min.), 5th minutes (LG-5 min.) and 24th hours (LG-24 hr.)	31
4-3 Mean (SD) CDTs before (base) and after (post) application of four ultrasound conditions: control, placebo, 20% pulse, and continuous ultrasound	32
4-4 Mean (SD) WDTs before (base) and after (post) application of four ultrasound conditions: control, placebo, 20% pulse, and continuous ultrasound	33

LIST OF FIGURES

FIGURE		PAGE
2-1	Frequencies of discharge of a cold pain fiber, a cold fiber, a warmth fiber, and a heat pain fiber	10
2-2	Transmission of thermal signals in the nervous system	12
2-3	Method of limits (A) and Method of levels (B)	15
3-1	Position of participant, physiotherapist and research assistant during ultrasound application	23
3-2	Thermal detection threshold testing procedure, showing the position of participant and researcher, the placement of the thermode on the thenar eminence and the holding of responding mouse.	25
4-1	Cold detection thresholds measured before and after placebo ultrasound, 20% pulse ultrasound, and continuous ultrasound.	32
4-2	Warm detection thresholds measured before and after placebo ultrasound, 20% pulse ultrasound, and continuous ultrasound.	33
