

2.2.1.4 Dual-task related gait changes: the role of secondary task difficulty	14
2.2.2 Association between dual-task gait performance and recurrent falls	15
2.3 Ability to allocate attention	17
CHAPTER 3 METHODS	22
3.1 Participants	22
3.1.1 Inclusion criteria	22
3.1.2 Exclusion criteria	23
3.2 Procedures	23
3.3 Outcome measures	26
3.3.1 Independent variables	26
3.3.1.1 Group	26
3.3.1.2 Secondary task characteristic	27
3.3.1.3 Instructional set	27
3.3.2 Dependent variables	27
3.3.2.1 Primary outcome measures	27
3.3.2.2 Secondary outcome measures	28
3.4 Equipment	28
3.5 Sample size	29
3.6 Statistical analysis	29
3.7 Location	29
CHAPTER 4 RESULTS	30
4.1 Participant Characteristics	30

4.2 Effect of secondary task on gait parameter during narrow walking	
4.2.1 Gait Speed	31
4.2.2 The rate of missteps	33
4.2.3 Cadence	33
4.3 Effect of task prioritization on gait parameters under the three dual-task walking conditions across groups	
4.3.1 Gait speed	36
4.3.2 Swing time	37
4.3.3 Stride length	38
4.3.4 Step width	38
4.3.5 The rate of missteps	39
4.4 Effect of task prioritization on the secondary task performance during dual-task walking across groups	
4.4.1 The rate of verbal responses	39
4.4.2 The rate of accuracy responses	40
4.4.3 The rate of spilling water	41
CHAPTER 5 DISCUSSION	43
5.1 Conclusion	50

LIST OF TABLES

Table		Page
1	Coefficients of variation for stride length and stride velocity among young and older subjects under both walking conditions	9
2	Parameters of walking performance under dual-task conditions for elderly non-fallers and elderly fallers	12
3	Mean values and coefficients of variation of stride time parameters under walking with counting forward and backward conditions among demented older adults	16
4	Characteristics and clinical measurements of participants	32
5	Effect of secondary task on gait parameters during narrow walking	34
6	Effect of prioritization conditions during dual-task walking while performing counting backward by 1, counting backward by 3s, and tray carrying task across all groups	42

LIST OF FIGURES

Figure		Page
1	Representative examples of gait velocity and stride-to-stride variability in gait velocity during single-task walking and dual-task walking	9
2	The effects of a secondary task on swing time variability among young adults, elderly non-fallers, and elderly fallers	11
3	The effect of dual task and three prioritization conditions on gait speed in healthy young adults and healthy older adults	18
4	Performance in verbal response time and gait velocity in healthy young adults and healthy older adults under three instructional conditions	20
5	Performance in verbal response time and gait velocity in healthy older adults and older adults with balance impairments under three instructional conditions	20
6	Attentional allocation index for healthy older adults and older adults with balance impairments	21
7	Procedures of the study	26
8	The effects of secondary task on gait speed during narrow walking between three groups	35
9	The effects of prioritization conditions on gait speed during dual-task walking while performing (C1, C3, TC) across all groups	36
10	The effects of prioritization conditions on swing time during dual-task walking while performing (C1, C3, TC) across all groups	37

LIST OF FIGURES (CONTINUED)

Figure		Page
11	The effects of prioritization conditions on rate of verbal response during dual-task walking while performing (C1, C3) across all groups	40

ABBREVIATIONS

AAI	Attentional allocation index
BBS	Berg Balance Scale
BDI	Beck Depression Inventory
C1	Counting backward by 1 task
C3	Counting backward by 3s task
CV	Coefficients of Variation
ES	Effect size
FB	Focus on both tasks equally
FN	Focus on the narrow walking task
FS	Focus on the secondary task
GV	Gait velocity
HOA	Healthy older adults
HYA	Healthy young adults
m	Meter
mm.	Millimeter
MMSE	Mini-Mental State Examination
OABI	Older adults with balance impairment
s	Second
SD	Standard deviation
TC	Tray carrying task
VRT	Verbal response time
