List of Figures		xiv
Chapter 1	Introduction	1
	1.1 Chapter Overview	2
	1.2 Electricity Supply Industry	3
	1.2.1 Overview of Electric Power System	3
	1.2.2 Electricity Supply Industry in Thailand	5
	1.3 Power Distribution System Performance and Research Justification	6
	1.4 Research Questions and Assumptions	9
	1.5 Research Methods and Proposed Solution	10
	1.6 Novel Contribution of Research	12
	1.7 List of Publications	13
	1.8 Thesis Organization	14
Chapter 2	Asset Management	15
	2.1 Chapter Overview	16
	2.2 Asset Management	16
	2.2.1 Asset Management Definition and Terminology	17
	2.2.2 Asset Management Framework	18
	2.2.3 Publicly Available Specification: PAS55	21
	2.3 Asset Management in Power Distribution Industry	24
	2.4 New Thought in Distribution Feeder Rehabilitation	26
	2.5 Risk Management	28
Chapter 3	Knowledge Management and Engineering in Power Delivery Business	32
	3.1 Chapter Overview	33
	3.2 Knowledge and Knowledge Management	33
	3.3 Knowledge Engineering	37
	3.3.1 Knowledge Elicitation	37
	3.3.2 Knowledge Engineering Concept	39
	3.3.2.1 Problem-Solving Methods	39
	3.3.2.2 Ontologies	40
	3.4 Application of Knowledge Engineering Methodologies in Power Distribution System	41
	3.4.1 CommonKADS Knowledge Modeling	41

3.4.2 Ontology101 48

Chapter 4 Power Distribution Asset Categorization 52
4.1 Chapter Overview 52
4.2 Objective of Asset Categorization 53
4.3 Categorization Terminologies and Approach 53
4.3.1 Controlled Vocabulary 54
4.3.2 Classification 55
4.3.3 Taxonomy 56
4.3.4 Ontology 56
4.3.5 Metamodel 57
4.4 Information Modeling Language 58
4.4.1 Unified Modeling Language 58
4.4.2 eXtensible Markup Language 61
4.4.3 Resource Description Framework 63
4.4.4 Common Information Model 67
4.4.5 Protégé-2000: Knowledge Modeling Tool 69
4.5 Categorization of power distribution network assets 71
4.5.1 Requirements for Asset Decision Making 71
4.5.2 Asset Modeling Process 72
4.5.3 Proposed Power Distribution Network Asset Model 82

Chapter 5 Risk Assessment for Power Distribution Network 86
5.1 Chapter Overview 87
5.2 Fuzzy logic 87
5.2.1 Basic Fuzzy Logic Theory 88
5.2.2 Fuzzy Inference System 96
5.3 Markov chain 100
5.3.1 Transition Probability 101
5.3.2 Probability of Absorption 104
5.3.3 Markov Process in Asset Condition Assessment 104
5.4 Fuzzy-Markov Assessment of Distribution Network Failure Possibility 105
5.4.1 Distribution Feeder Component Deterioration and Failure 106
5.4.2 Determination of Distribution Feeder Asset Conditions 108
5.4.3 Asset Deterioration Model and Future Condition Rating 116
5.4.4 Determination of Feeder Failure Possibility 120
5.4.5 Combining Together 128

Chapter 6 Distribution System Risk Impact and Resolution 130
6.1 Chapter Overview 130
6.2 Power Outage Cost 131
6.2.1 Customer Outage Cost 131
6.2.1.1 Customer Damage Model 132

ลิขสิทธิ์มหาวิทยาลัยเชียงใหม่

6.2.1.2 Interrupted Energy Rate 135
6.2.2 Utility Damage Cost 136
6.3 Cost Estimation for Utility Investment 137
6.3.1 Work breakdown structure 137
6.3.2 Using WBS to Estimate Project Costs 139
6.3.3 Determination of Resolution Cost 140
6.4 Total Financial Impact 142

Chapter 7 Novel Decision Support System for Power Distribution Network Asset Management 145
7.1 Chapter Overview 146
7.2 Requirement for Distribution Network Investment 146
7.3 Multiple Criteria Decision Analysis 147
7.3.1 Concept of Multicriteria Decision Making 148
7.3.2 General Process of Multicriteria Decision Making 149
7.3.3 Analytical Hierarchy Process 151
7.3.3.1 Pair-wise Comparison 152
7.3.3.2 Comparison Matrix 154
7.3.3.3 Priority Vector 155
7.3.3.4 Consistency 157
7.4 Decision Support System Architecture 158
7.4.1 Risk Module 159
7.4.2 Cost Module 160
7.4.3 Decision Module 160
7.4.4 Asset Categorization Module 161
7.5 Simulation Test 161
7.5.1 Test Feeder 161
7.5.2 Determination of Feeder Failure Possibility 164
7.5.3 Determination of Financial Impact 167
7.5.4 Performing Multicriteria Decision Analysis 169
7.6 Discussion on the Performance of Decision Support System 173

Chapter 8 Case Studies 176
8.1 Chapter overview 176
8.2 Enhancing the Distribution Feeder in Industrial Estate Area 176
8.2.1 Feeder Data 178
8.2.2 Determination of Feeder Failure Rate 181
8.2.3 Determination of Financial Impact 183
8.2.4 Multicriteria Decision Analysis 183
8.2.5 Discussion and Analysis 185
8.3 Conversion of Overhead Distribution Feeders in World Heritage Site 186
8.3.1 Definition of Problem and Goals 187
8.3.2 Analysis of Requirement and Constraints 187
8.3.3 Identification of Alternative Choices 188
8.3.4 Development of Decision Model Hierarchy 196
8.3.5 Priority Ranking Using AHP 196

8.3.6 Discussion and Analysis 197

Chapter 9 Conclusion and Future Works 198
9.1 Conclusion 198
9.2 Future works 200
References 202
Appendix A 212
Appendix A1 213
Appendix A2 215
Appendix A3 226
Appendix A4 229
Curriculum Vitae 234

LIST OF TABLES

Tables		Page
3.1	Knowledge management framework	36
3.2	Probes to elicit information in structured interviews	38
3.3	Overview of analytic task	43
3.4	Overview of synthetic task	44
3.5	General characterization of classification template	45
3.6	Classes and object of power distribution cable	46
3.7	General characterization of assessment template	47
3.8	Cases and norms of overhead distribution cable	48
4.1	The main classes with some of the associated attributes for distribution feeder asset information model	78
5.1	Examples of linguistic variables with typical linguistic values	89
5.2	Truth table for five operations that are frequently applied to proposition	92
5.3	Proof of $(p \rightarrow q) \leftrightarrow \neg[p \wedge (\neg q)]$	93
5.4	Validation of equation (5.11) and (5.12)	93
5.5	Mulit-valued logic operation	94
5.6	The cartesian product of fuzzy sets *A* and *B* using Mamdani implication	95
5.7	The example of fuzzy knowledge rules	97
5.8	Fuzzy set application areas in power systems	100
5.9	Technical condition states of distribution assets	114
5.10	Distribution feeder asset components categories and their relative weights as specified by utility experts	116
5.11	Fuzzy inference rules for Markov deterioration model	119
5.12	General idea of the fuzzy sets of linguistic variables	127
5.13	Fuzzy rule base for failure likelihood determination	128
6.1	Average customer damage cost of different customer types in MEA	133
6.2	Average composite customer damage models	135
6.3	Composite customer outage cost in Thailand	136
6.4	Price cap for each customer type in MEA	137
6.5	A typical example WBS of pole installation work	138
6.6	Typical cost components of overhead distribution feeder	140
6.7	Typical cost components of underground distribution feeder	140
6.8	Example of cost estimation of underground feeder	141
7.1	Numerical rating and verbal preference	152
7.2	Number of alternatives and comparison	154
7.3	Formation of comparison matrix	154
7.4	Random consistency index	157
7.5	Condition rating of feeder components	165

Tables **Page**

7.6	Comparison matrix and priority vector of main criteria	170
7.7	Comparison matrix and priority vector of subcriteria under technical matter	170
7.8	Comparison matrix and priority vector of subcriteria under social matter	171
7.9	Comparison matrix of implementation options against reliability subcriteria	171
7.10	Comparison matrix of implementation options against construction subcriteria	171
7.11	Comparison matrix of implementation options against maintenance subcriteria	171
7.12	Comparison matrix of implementation options against financial criteria	172
7.13	Comparison matrix of implementation options against safety subcriteria	172
7.14	Comparison matrix of implementation options against safety subcriteria	172
7.15	Overall ranking of alternatives	172
7.16	Overall ranking of alternatives when technical criterion is equally important as compared to financial	173
8.1	Outage statistics of Substation KO	177
8.2	Operational and environmental stressors feeder KO412	180
8.3	Condition rating of feeder components	181
8.4	Overall ranking of alternatives when financial criterion is moderately important as compared to technical	184
8.5	Overall ranking of alternatives when technical criterion is equally important as compared to financial	184
8.6	Overall ranking of alternatives when technical criterion is moderately important as compared to financial	185
8.7	Reliability standard in MEA area	186
8.8	Set of criteria of undergrounding project	188
8.9	Cost of various undergrounding projects	196
8.10	Overall ranking of implementation options	197

LIST OF FIGURES

Figure		Page
1.1	The general configuration of electric power system	4
1.2	The electricity supply industry in Thailand	6
1.3	Decision support framework	12
2.1	Stakeholders in utility business	15
2.2	General asset management framework	19
2.3	Skills and responsibilities in asset management circle	20
2.4	Asset management framework	21
2.5	Scope and vital business context of this PAS	22
2.6	Holistic approach asset management	23
2.7	Asset management system elements	23
2.8	Bathtub curve and asset management processes	25
2.9	The architecture of DSS for power distribution network asset management	27
2.10	Standard risk assessment model	29
2.11	Generic risk management process change	30
3.1	Evolution of knowledge	33
3.2	The general knowledge management model	35
3.3	Overview of knowledge categories in the knowledge model	41
3.4	Hierarchy of knowledge-intensive task type	42
3.5	Classification task template	45
3.6	Assessment task template	48
3.7	Classes and class hierarchy	50
4.1	The LoadBreakSwitch class	59
4.2	Example of Generalization	60
4.3	Example of Association	60
4.4	Example of Aggregation	61
4.5	Example of Composition	61
4.6	XML document describing distribution feeder	62
4.7	Annotated simple XML Schema example describing the data within a feeder	63
4.8	RDF statement as a graph	64
4.9	RDF document of statement shown in figure 4.8	65
4.10	RDF schema of figure 4.8 example	66
4.11	A fragment of the CIM Wires model	67
4.12	A Sample of CIM RDF schema definition	68
4.13	A Sample of CIM RDF document	69
4.14	The representation of ontology in Protégé-2000	70
4.15	An instance of a class Pole	71
4.16	Feeder knowledge representations in RDF graph	79

4.17 The corresponding RDF schema of Feeder knowledge representations 81
4.18 Sample of Feeder knowledge representations expressed in RDF/XML 81
4.19 Power distribution network asset model 83
4.20 Asset model showing the formation of distribution feeder 84
5.1 Fuzzy sets on climate temperature 88
5.2 Triangular membership function 91
5.3 Trapezoidal membership function 91
5.4 The fuzzy inference system 96
5.5 Fuzzy sets defining temperature 98
5.6 Transition of states 102
5.7 Membership of condition state at different time steps 105
5.8 Distribution of asset condition grade along its entire age 117
5.9 Fuzzy sets of asset age 118
5.10 Fuzzy sets of asset condition grade 118
5.11 Fuzzy sets of asset deterioration rate 118
5.12 The overall architecture of asset deterioration model 120
5.13 Fuzzy Inference System 121
5.14 Fault causes measured in the EPRI fault study 122
5.15 Stage wise fuzzy reasoning process 126
5.16 Risk assessment engine for distribution feeder 129
6.1 Outage cost to utility and its customers 131
6.2 MEA customer damage cost based on customer type 134
6.3 WBS for power distribution system project 138
6.4 A typical resolution action employed to reinforce distribution network performance 141
6.5 Framework for financial impact evaluation 142
6.6 Loss of fixed asset by prevention replacement 143
7.1 The hierarchical structure of AHP decision model 152
7.2 Pair-wise comparison of three fruits 153
7.3 The overall architecture of DSS for power distribution network asset management 159
7.4 Single line diagram of simulated feeder 162
7.5 Route and equipment location of simulated feeder 163
7.6 Instance of test feeder modeled by Protégé 2000 164
7.7 Condition rating of test feeder 166
7.8 Failure rate contributed from feeder condition rating 167
7.9 Illustration of cost and benefit among options 169
7.10 Investment decision hierarchy 170
8.1 Single line diagram of Substation KO feeder 178
8.2 Line route of feeder KO412 179
8.3 Condition rating of feeder KO412 182
8.4 Failure rate of feeder KO412 182
8.5 Illustration of cost and benefit among options 183
8.6 Feeder rehabilitation decision hierarchy 184
8.7 Direct buried cable installation 190
