ACKNOWLEDGEMENT	iii
ABSTRACT	iv
LIST OF TABLES	x
LIST OF ILLUSTRATIONS	xii
ABBREVIATIONS	xiv
CHAPTER I INTRODUCTION	15
I.1 Principles, theory and rationale	15
I.2 Purposes of the study	16
I.3 Anticipated benefits	16
I.4 Scope of the study	17
I.5 Definition	17
CHAPTER II LITERATURE REVIEW	18
CHAPTER III MATERIALS AND METHODS	26
III.1 Materials	26
III.2 Methods	27
III.2.1 Cephalometric measurement	27
III.2.2 Crown inclination measurement	30
III.3 Statistical analysis	40
CHAPTER IV RESULTS	41
IV.1 Skeletofacial morphology	43
IV.2 Crown inclination	45
IV.3 Correlations between the crown inclination and the skeletofacial cephalometric variables	52

	Page
CHAPTER V DISCUSSION	59
V.1 Discussion of the results of the study	60
V.1.1 Skeletofacial cephalometric variables	60
V.1.2 Crown inclination	62
V.1.3 Correlations between the crown inclination and the skeletofacial cephalometric variables and predictable equations of the crown inclination	64
V.2 Discussion of the factors affecting data	66
V.2.1 The factors affecting the cephalometric variables	66
V.2.2 The factors affecting the crown inclination	66
CHAPTER VI CONCLUSION	70
REFERENCES	72
CURRICULUM VITAE	75

LIST OF TABLES

Table	Page
1. Crown inclination described by Andrews (1976).	19
2. Crown inclination described by Duangtaweesub (1997).	21
3. Age distribution of male, female and sexes combined samples	26
4. Comparisons of the skeletofacial cephalometric variables of males and females	43
5. Mean, standard deviation, minimum, maximum and estimate values of means of the skeletofacial cephalometric variables when both sexes combined.	45
6. Comparisons of the crown inclination of upper teeth of males and females	46
7. Comparisons of the crown inclination of lower teeth of males and females	47
8. Comparisons of the crown inclination of the right and the left sides when both sexes combined.	49
9. Mean, standard deviation, minimum, maximum and estimate values of mean of the crown inclination of each tooth when both sexes and sides combined.	50
10. Correlations between the crown inclination and the skeletofacial cephalometric variables of males	52
11. Correlations between the crown inclination and the skeletofacial cephalometric variables of females	53
12. Stepwise multiple linear regression of the crown inclination of lower central incisor of males	54
13. Stepwise multiple linear regression of the crown inclination of lower lateral incisor of males	56

Table	Page
14. Stepwise multiple linear regression of the crown inclination of lower central incisor of females	57
15. Stepwise multiple linear regression of the crown inclination of lower lateral incisor of females	58
16. Comparisons of means and standard deviations of cephalometric variables in three different ethnic groups	61
17. The comparisons of the crown inclination of Andrews (1976), Dellinger (1978), Duangtaweesub (1997) and present study	63

LIST OF ILLUSTRATIONS

Figure	Page
1. Crown inclination was determined by the resulting angle between a line 90 degrees to the occlusal plane and the line tangent to the middle of the labial or buccal clinical crown.	18
2. Horizontal occlusal line	20
3. Steiner's acceptable compromised chart (Proffit and Fields, 1993)	21
4. Incisor compensation in skeletal class III (Bibby, 1980)	23
5. Incisor compensation in skeletal class II (Bibby, 1980)	23
6a. The reference points used in this study.	31
6b. The reference lines used in this study.	32
7a. The original (CCKL CREATOR, U.S.PAT.4,766,675) and modified protractors	33
7b. The crown inclination measuring instrument that was combined with surveyor and modified protractor.	33
7c. Diagram of the composition of the crown inclination measuring instrument	34
8. The caliper (MECANE) that was used for measuring the clinical crown height.	35
9a. The impression models which were used to define the long axes of the clinical crowns and the LA points (frontal view).	35
9b. The impression models which were used to define the long axes of the clinical crowns and the LA points (right lateral view).	36

Figure	Page
9c. The impression models which were used to define the long axes of the clinical crowns and the LA points (left lateral view).	36
9d. The protractor was set parallel to the surveying platform before measuring.	37
9e. The HOL was set parallel to the surveying platform by adjustment of the surveying table until the average of the LA points of the left and the right central incisors was at the same level as the tip of horizontal arm.	38
9f. At the same level of Figure 9e, the LA point of the right first molar was at the same level as the tip of the horizontal arm.	38
9g. At the same level of Figure 9e, the LA point of the left first molar was at the same level as the tip of the horizontal arm.	38
9h. Setting the vertical protractor arm until the scribe line touching the LA point	39
9i. The crown inclination value was recorded by reading the protractor scale.	39

ABBREVIATIONS

- IU1 = Inclination of upper central incisor
IU2 = Inclination of upper lateral incisor
IU3 = Inclination of upper canine
IU4 = Inclination of upper first premolar
IU5 = Inclination of upper second premolar
IU6 = Inclination of upper first molar
IU7 = Inclination of upper second molar
IL1 = Inclination of lower central incisor
IL2 = Inclination of lower lateral incisor
IL3 = Inclination of lower canine
IL4 = Inclination of lower first premolar
IL5 = Inclination of lower second premolar
IL6 = Inclination of lower first molar
IL7 = Inclination of lower second molar
